EDUCATION

Rutgers University – New Brunswick | B.S. Computer Science | GPA: 3.53/4.0 2022 – 2026

Relevant coursework: Intro to Computer Science, Data Structures, Computer Architecture, Discrete Math I, Discrete Math II, Principles of Information & Data Management, Design & Analysis of Computer Algorithms, Software Methodology, Data Management for Data Science, Imaging & Multimedia, Intro to Artificial Intelligence, Deep Learning.

EXPERIENCE

Sentari AI | Software Engineer Intern

Jun 2025 – Aug 2025

Python, FastAPI, OpenAI API, multi-agent systems, Supabase/PostgreSQL, AWS, Git

- Built the company's core AI response-generation engine, powering 2,000+ requests per day, by designing a custom multi-agent framework on OpenAI's GPT models as a founding engineer.
- Increased adaptive response accuracy by 40% by architecting a dynamic Supabase/PostgreSQL data layer that captures evolving user-interaction data.
- Enabled secure, production-grade API access for 800 concurrent users at launch, by shipping a FastAPI backend with OAuth2/JWT authentication, structured error handling, and CORS on AWS infrastructure.

PROJECTS

Iron Blueprint | Cross-platform gym tracking app (ongoing)

2025 – Present

Next.js, TypeScript, SwiftUI, Supabase (Postgres, Auth, RLS), TanStack Query, Zustand, Turborepo

- Shipped a cross-platform fitness app used by 200+ beta testers, by building a Next.js/TypeScript web dashboard and native SwiftUI iOS app on one shared Supabase Postgres backend across two platforms.
- Eliminated client-side data-integrity risk across both clients by enforcing Postgres triggers and Row-Level Security that auto-derive personal records on every set write and isolate per-user data.
- Prevented data loss during reloads and device locks by designing a persisted Zustand store paired with TanStack Query for resilient client-side session state.
- Cut cross-codebase debugging time by 40% (roughly 5 hours per bug), by using Claude Code and Cursor to triage issues across the TypeScript and Swift codebases in parallel.

AI Cyber Threat Detector | System log analysis and threat detection app

2024

Flask, pandas, regex, REST APIs, Matplotlib, TensorFlow, AWS, CI/CD

- Classified 2,000+ log entries into structured threat summaries, by building a Flask REST API that parses raw system logs using pandas and regex.
- Flagged anomalous behavior with 95% accuracy, by training a TensorFlow model to classify threats from parsed log features.
- Cut manual log review time by visualizing threat trends in Matplotlib and automating deployment through a CI/CD pipeline.

CERTIFICATIONS

- IBM Full Stack Software Developer (Coursera) — 12-course program covering HTML, CSS, JavaScript, React, Python, Node.js, Express, Docker, Kubernetes, and SQL.

TECHNICAL SKILLS

Languages: Python, Java, TypeScript, JavaScript, Swift, SQL, C, HTML, CSS

AI / ML: OpenAI API, multi-agent systems, LangGraph, LangChain, TensorFlow, PyTorch, prompt engineering, Claude Code, Cursor, Codex

Backend: FastAPI, Node.js, Express, Django, Flask, REST APIs, OAuth2/JWT

Frontend: React, Next.js, SwiftUI, Tailwind CSS, TanStack Query, Zustand

Databases & Cloud: PostgreSQL, MySQL, Supabase, Firebase, AWS (EC2, Lambda, S3), Docker, Kubernetes, Vercel, Git, CI/CD
